Project Panel

You can find each composition of the project here.

All of the elements are in the folders. Just select the folder and choose the timers.

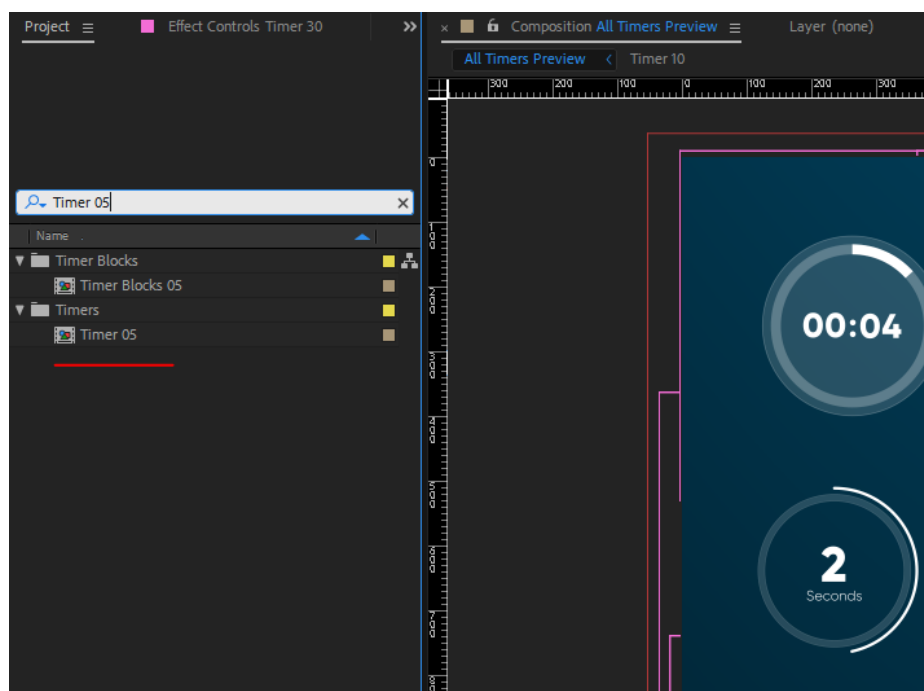

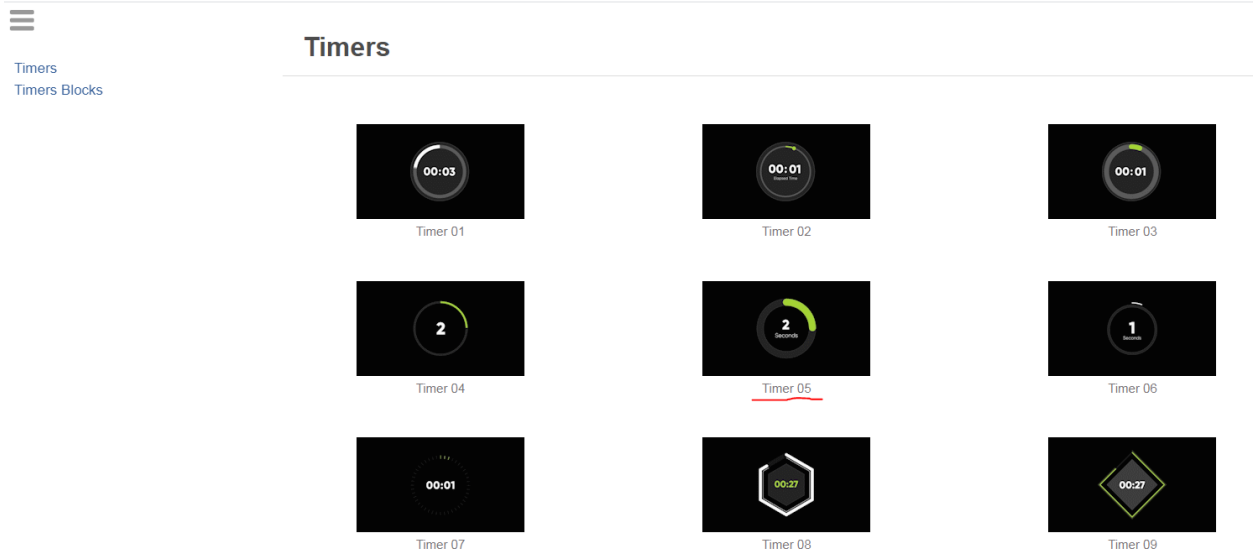

Finding Your Timers

The timers are sorted in 2 folders (**Timers Block**, **Timers**).

You can either locate them in their opened folders or you can use the search bar to find the timers by their names (maybe a bit faster if you know what you are looking for).

Please use the **HTML catalogue** as a reference.

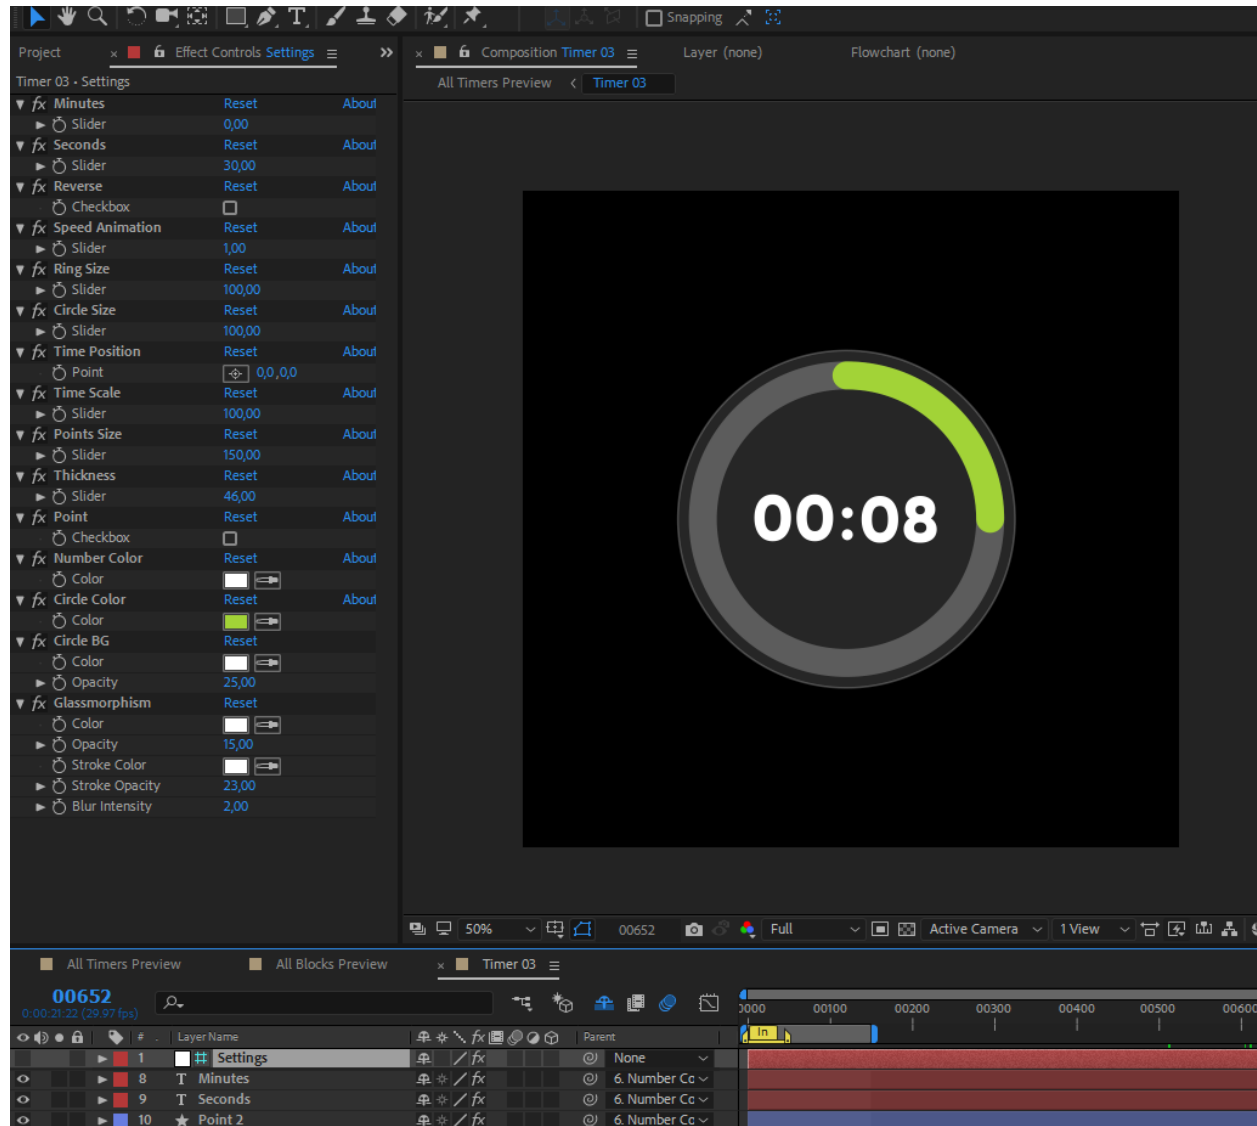

Customization of timers

To customize the added timer, open the composition of the element and change all the available items here. To change the text, just edit text layers.

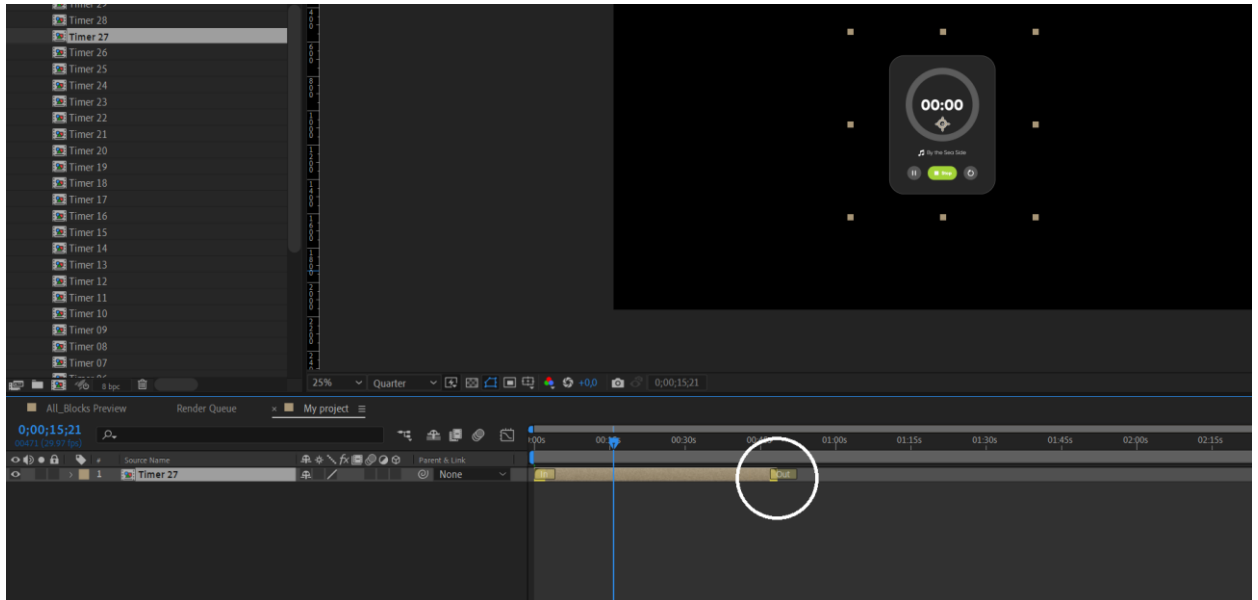

To change general settings, select **“Settings”** layer > **Effects Controls**

For example, here you can set up your values, color and visibility of some elements.

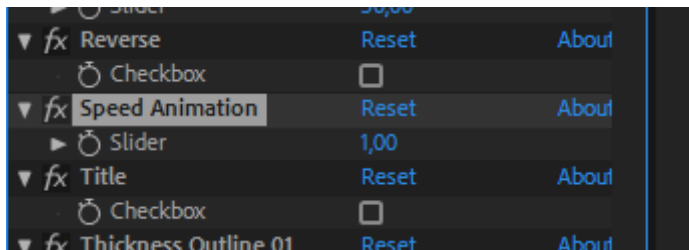

If you want to change the duration of a composition

The default compositions timing is one minute. If you want to change duration of the elements just select the layer and extend it to the right place.

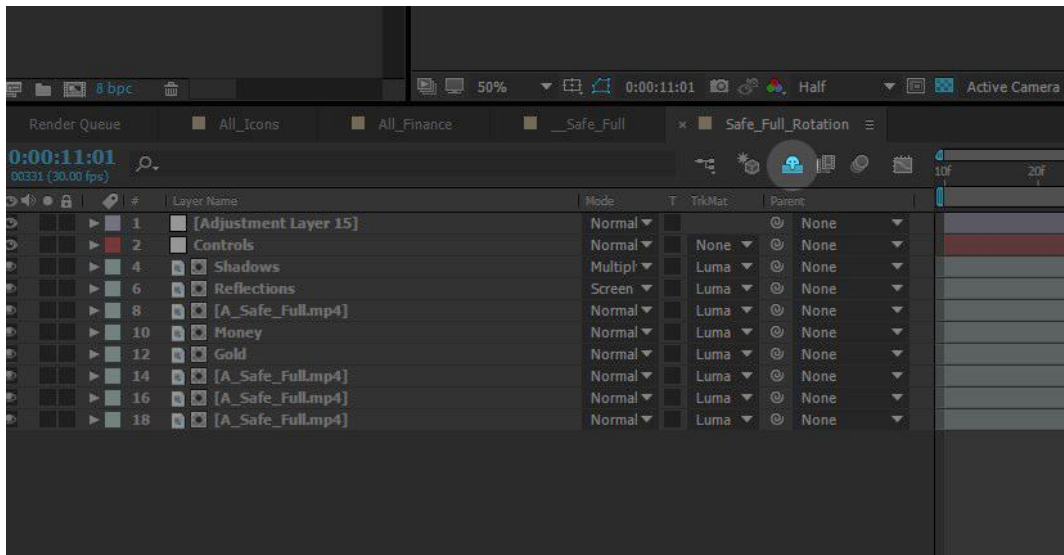

Note. If you stretch the composition a lot, the speed of the animation may change, use the speed value in the controller

How can I see all of layers for more customization?

Just turn off the "**Shy**" switch in each composition and you can find the other layers.

"Effect Controls" panel

All the effects such as colors , position controller and etc... are in

The "**Effect Controls**" panel, it is near or behind the "**Project Panel**"

If you can't see this , press (**F3**) key
