

“Parallax Scrolling Slideshow” – How To Edit

Updated 8th October 2014

- - -

Congratulations and thank you for purchasing Parallax Scrolling Slideshow!

Create the perfect video for your parallax scrolling website with
Parallax Scrolling Slideshow!

Perhaps you have a vertical scrolling Wordpress theme and could use a video slideshow
which mimics the movement of the site itself. This After Effects template is clean and
simple yet contains a variety of attractive slide designs to keep your audience engaged.

You can even rearrange the panel design order and/or remove panels to create your own
bespoke sequence.

Contents :

- **Fonts**
- **Editing the main text**
- **Adding images and their descriptions**
- **Adding your logo and final text elements**
- **Changing the order of the sequence (advanced editing)**
- **Rendering**

- - -

Fonts

The FREE fonts used in the project can be downloaded here :

Bebas – <http://www.dafont.com/bebas.font>

Economica – <http://www.fontsquirrel.com/fonts/economica>

Editing the main text

In the folder **_EDIT THESE** locate the sub-folder **Text**.

The **Text** folder contains all the main text compositions (apart from image descriptions and end text).

When editing your text pay close attention to the **EDIT POINT** markers which denote at what point in the timeline the text is fully visible – some text animates in and is not visible on screen for the first few seconds. Not all text compositions require an **EDIT POINT** marker.

Panel 05 has three text placeholders to edit.

- - -

Adding images and their descriptions

In the folder **_EDIT THESE** locate the sub-folder **Images**.

The **Images** folder contains all the main image compositions.

When adding your images/video into these compositions place your media underneath all existing layers and at the start of the timeline.

There are 2 orange effect layers which will 1) slowly scale your image over time and 2) tint your media using a Tritone effect (editable by unlocking this layer and changing the tint colors). Both of these effects can be turned on or off by disabling their visibility.

You will want to edit the image descriptions in these compositions. These are the top-most text layers and can be re-positioned or removed.

Note that Panel 05 has three image placeholders and Panel 09 has 9 image placeholders which require media added.

The logo for 'enchanted studios' is displayed in a stylized, lowercase font. The word 'enchanted' is in white, and 'studios' is in a darker shade. A pink asterisk is placed between the two words. The background of the entire page is a dark blue with a repeating pattern of light blue asterisks.

Adding your logo and final text elements

In the folder **_EDIT THESE** locate the sub-folder **Final Panels**.

Final LOGO composition :

Simply place your logo in here.

Final Text A composition :

This is the text which appears before your logo panel and is currently set to repeat the title screen text (Text 01).

Edit your text at the **EDIT POINT** marker.

Final Text B composition :

This is the text that appears under your logo, such as your web address.

Edit your text at the **EDIT POINT** marker.

Changing the order of the sequence (advanced editing)

There's not much advanced editing to do on this template unless you are changing the in-point of Panels, in which case you would need to adjust the in-point of the Arrow layers (see 'Arrow Layers' below).

– In the **Main Comp** composition :

Info Markers (green layers 14-16) denote where Panels begin their appearance into the sequence. Please note that Panels 05 and 09 have longer durations than the other panels, if you intend on re-ordering the sequence (explained in 'The **ALL PANELS** Composition' below).

Note the **End Text Comp** layer (layer number 17) is where the final text and logo appear, after all your images/videos have been seen.

– Arrow Layers

Layers 1-13 are for the subtle arrow which appear at the bottom of the frame when the sequence is about to change. The in-point of these layers would need to slide along if you are changing the in-point of any of the layers in the **ALL PANELS** composition (see 'The **ALL PANELS** Composition' below).

– The **ALL PANELS** Composition

To change the order of panels use the composition **_EDIT THESE / ALL PANELS**

This is where you can replace panels to re-order your sequence. You need to select the Panel layer you wish to change then hold alt/option and drag a Panel from the **_EDIT THESE / Panels** folder onto the highlighted layer to replace it.

A note on replacing Panels 05 and 09

Please note that the existing Panels 05 and 09 have longer durations to the other Panels (as they contain multiple text and image placeholders) and would require you to move subsequent layers along the timeline. I would recommend leaving Panels 05 and 09 where they are if you are not familiar with After Effects.

- - -

Rendering

To render simply place the composition **Main Comp** into your render queue and choose your desired output specifications.

Main Comp is set up at 1920x1080 30fps
