

# SHADOW

## What is this?

This a preset (*.FFX for Adobe After Effects*).

With this preset can make unique shadow with custom options.

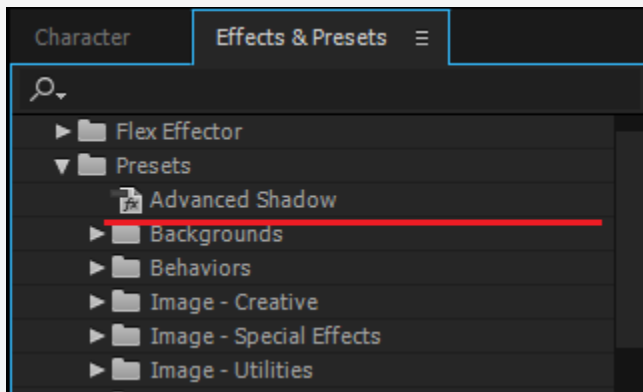

## How to use?

Just add the preset on your composition/footage/text or media file.

And customize as you wish!

You can add preset via Effects & Presets

To use preset via Effects & Presets you need copy this preset into the following folders:

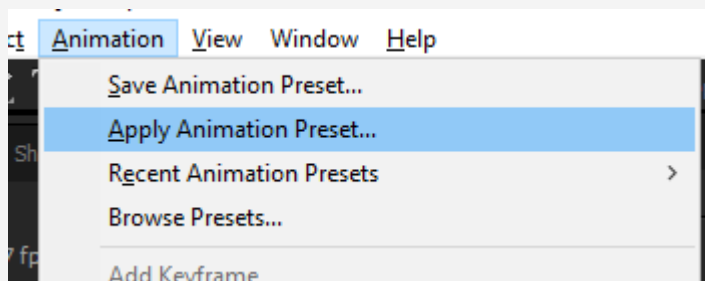

Windows

*C:\Program Files\Adobe\Adobe After Effects CS[x]\Support Files\Presets*

Mac

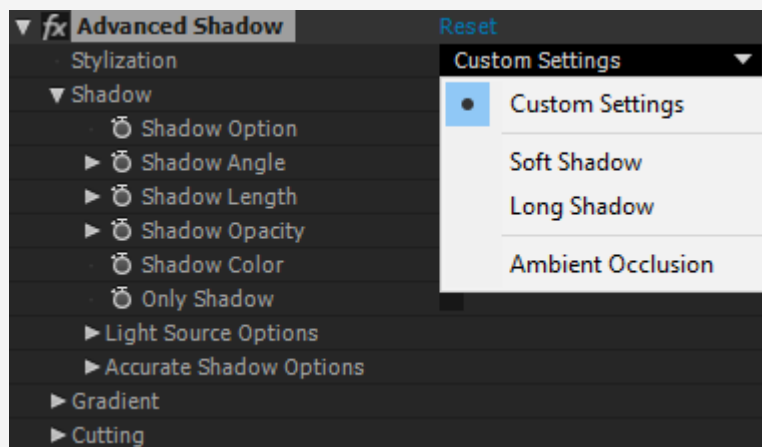

*/Applications/After Effects CS[x]/Presets*

Also you can add the preset faster via **Animation -> Apply Animation Preset...**

## How to customize?

Choose stylization to continued

## CUSTOM SETTINGS

WITHOUT CHANGES

## **SOFT SHADOW**

WITHOUT CHANGES

## **LONG SHADOW**

WITHOUT CHANGES

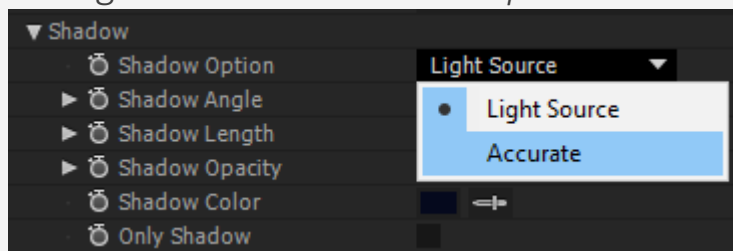

# AMBIENT OCCLUSION

WITHOUT CHANGES

From **Custom Settings** easily customize to *Soft Shadow/Long Shadow/Ambient Occlusion* and can change any parameters. When selected stylization (not custom) part of parameters you can't change.

Let's make long shadow from Custom Settings. Change *Shadow* -> *Shadow Option* to **Accurate**.

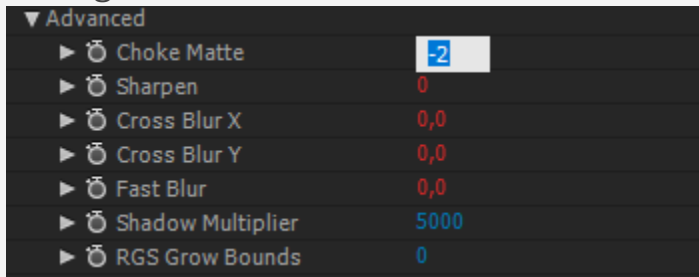

Change *Alpha Levels* -> *Alpha Input White* from 255 to 2.

▼ Alpha Levels		
▶	Alpha Input Black	0,0
▶	Alpha Input White	2
▶	Alpha Gamma	1,00
▶	Alpha Output Black	0,0
▶	Alpha Output White	255,0

Look's bad. Need fix it!

Change *Advanced* -> *Choke Matte* from 0 to -2.

Look's better. But we can do better with that's parameters!

Make any shadow! Use parameters for adjust!

And good luck!
